## Responsibility results in commitment!

Since 1974 Vereinigte Papierwarenfabriken GmbH (VP) has been manufacturing medical packaging and indicators for hospitals, service providers and medical practices, as well as packaging systems for sterile disposable products under the brand stericlin®. Our products are manufactured in state-of-the-art production plants under cleanroom conditions and on the basis of carefully validated production processes. They meet and exceed the requirements of standards and laws for medical devices. Our quality has been setting standards worldwide ever since.

## Climate protection

Environmental awareness is company policy at the VP Group: our work is 100% climate neutral. Unavoidable emissions are completely compensated for by internationally accepted emission reduction certificates. VP also fulfils all ISO requirements in the area of environmental management and energy management.

## Logistics

We deliver all stericlin® products directly from our warehouse in Feuchtwangen, Germany - quickly and efficiently via automated warehouse and picking systems. Benefit: shorter replenishment times and smaller inventories at customers.

Feuchtwangen site, Germany

State-of-the-art machinery

Manufacturing processes, materials and test methods comply with standards

State-of-the-art laboratory technology and analytics

## Overview of products from stericlin®

## See-through-reels flat and gusseted paper/film

### with STEAM-, EO- and FORM-indicator - ISO 11607, CE

See-through pouches and reels (catalogue page 2-10 to 2-30) are the universal packaging solution for sterilisation applications and perfectly meet the packaging demands of almost all light and medium weight instruments and sets.

The sterilisation proof 70 g/m<sup>2</sup> heavy-duty paper is an effective barrier against germs and bacteria, yet it permits the transmission of air, steam or sterilisation gases. The three indicators for STEAM-, EO- and FORM-sterilisation are imprinted outside the filling space.

## See-through-pouches and see-through-reels flat - non-woven/film - ISO 11607, CE

This see-through packaging is made of non-woven fleece bonded with composite film. Three indicators for STEAM-, EO- and FORM-sterilisation are imprinted outside the filling space.

This system combines all the sterilisation advantages of packaging applying non-woven fabrics with the handling benefits of see-through packaging.

The extreme air and steam permeability allows application with bulky and porous objects. The mechanical stability is ideal for handling heavy instruments.

## See-through-pouches and see-through-reels flat - Tyvek®/film with VH2O2- (PLASMA) and EO-indicator - ISO 11607, CE

The quality of see-through packaging made of Tyvek® and film is decisively determined by the choice of materials. Stericlin® only uses the strongest medical grade of Tyvek®: Type 1073 B with 75 g/m². Outstanding barrier properties against germs, bacteria and moisture, and also extremely high resistance to penetration and fibre-free peeling are particular characteristics of this sterile barrier system.

Tyvek® is a non-woven polyethylene fabric manufactured by DuPont. Tyvek® is not suitable for steam sterilisation, but fully compatible with the requirements of VH2O2 (plasma) sterilisation and irradiation. This sterile barrier system is also first choice for gas sterilisation, for Tyvek® hardly absorbs any toxic gases and thus results in residual toxic gas levels that are far below the legal limit values.

### See-through-pouches - Tyvek®/film

Article-No.	Size in cm	Pack (pcs.)

## Paper bags gusseted - ISO 11607, CE with STEAM-indicator

Stericlin® paper bags are suitable for STEAM-, EO-, FORM- and Gamma-sterilisation and are made of 60 g/m² medical grade paper with imprinted STEAM-indicator.

It's not possible to peel paper bags. An aseptic removal is only feasible by using scissors.

## Wrapping material crepe

### ISO 11607, EN 868, CE

Crepe is manufactured from 100 % medical-quality cellulose fibres and combines most economical wrapping with good drapability. Crepe is particularly suitable for the packaging of lighter instruments and sets.

For double packaging a combination of crepe-, non-woven- and SMS-material is possible - independent from colour and size. Please follow the packing methods described in the DIN 58953 part 7 or other relevant international standards.

## Wrapping material crepe sensitive

### ISO 11607, EN 868, CE

Crepe sensitive is softer and thus more flexible to handle due to a special creping process.

For double packaging a combination of crepe-, non-woven- and SMS-material is possible - independent from colour and size. Please follow the packing methods described in the DIN 58953 part 7 or other relevant international standards.

## Wrapping material non-woven 52g

### ISO 11607, EN 868, CE

Non-woven 52g is a material which has an excellent drapability and an over-average mechanical strength. Non-woven 52g is suitable for packing of medical goods like instrument trays and textiles.

For double packaging a combination of non-woven-, SMS- and crepe-material is possible - independent from colour and size. Please follow the packing methods described in the DIN 58953 part 7 or other relevant international standards.

## Wrapping material interleaved non-woven blue / green 52g

### ISO 11607, EN 868, CE

Non-woven 52g is a material which has an excellent drapability and an over-average mechanical strength. Non-woven 52g is suitable for packing of medical goods like instrument trays and textiles.

In non-woven 52g interleaved packs blue and green non-woven sheets are alternating packed together. Packing with non-woven interleaved offers a lot of benefits. The different colours of inner and outer layers make detection of damages of the pack easier. The time-consuming put together of blue and green non-woven sheets from two different packs becomes unnecessary.

Please follow the packing methods described in the DIN 58953 part 7 or other relevant international standards.

3FITL340118	120 x 120	100
3FITL340120	120 x 140	100

## Wrapping material non-woven 59g

### ISO 11607, EN 868, CE

Heavy medical goods like instrument trays are a challenge for wrapping materials. The wrapping material must have a good drapability, a very high tensile strength and, of course, it must form an efficient barrier against bacteria. Non-woven 59g wrapping material was developed especially for those demanding applications in the CSSD. The combination of pulp with a high share of polyester fibres makes this non-woven extremely robust. Therefore it is suitable as inner packing layer.

For double packaging a combination of non-woven-, SMS- and crepe-material is possible - independent from colour and size. Please follow the packing methods described in the DIN 58953 part 7 or other relevant international standards.

3FVLI350126	140 x 140	100

## Wrapping material non-woven polypropylene SMMS 37g

### ISO 11607, EN 868, CE

SMMS 37g is a tear proof, resilient and excellent drapable non-woven material made of polypropylene fibres which is perfectly suitable for all kind of wrapping applications. It is a four layered SMMS-material, which is made up of two layers of „spunbond-fibres“ and two layers of „meltblown-fibres“. The spunbond layers ensure an extraordinary flexibility and drapability, whereas the meltblown layers form an efficient barrier against bacteria. The SMMS is of blue colour.

For double packaging a combination of SMS-, non-woven- and crepe-material is possible - independent from colour and size. Please follow the packing methods described in the DIN 58953 part 7 or other relevant international standards.

#### Non-woven polypropylene SMMS 37g

Article-No.	Size in cm	Pack (pcs.)

3FSMS355120	120 x 140	120
3FSMS355126	140 x 140	120
3FSMS355127	140 x 190	80

## Wrapping material non-woven polypropylene SSMMS 43g

### ISO 11607, EN 868, CE

SSMMS 43g is an extremely tear proof and resilient non-woven material made of polypropylene fibres which is perfectly suitable for heavy duty applications. It is a five layered SSMMS-material, which is made up of three layers of „spunbond-fibres“ and two layers of „meltblown-fibres“. The spunbond layers ensure an extraordinary flexibility and drapability, whereas the meltblown layers form an efficient barrier against bacteria.

This product is additional qualified as a drape according to DIN EN 13795 in less critical area.

Each sheet is two-toned - blue and violet. Both sides can be used inside and outside without restriction. This enables a colour branding of medical devices (e. g. colour coding for different medical disciplines).

For double packaging a combination of SMS-, non-woven- and crepe-material is possible - independent from colour and size. Please follow the packing methods described in the DIN 58953 part 7 or other relevant international standards.

## Wrapping material non-woven polypropylene SMMS 60g

### ISO 11607, EN 868, CE

SMMS 60g is an extraordinarily tear proof and resilient non-woven material made of polypropylene fibres which is perfectly suitable for heavy duty applications. It is a four layered SMMS-material, which is made up of two layers of „spunbond-fibres“ and two layers of „meltblown-fibres“. The spunbond layers ensure an extraordinary flexibility and drapability, whereas the meltblown layers form an efficient barrier against bacteria. The SMMS is of blue colour.

For double packaging a combination of SMS-, non-woven- and crepe-material is possible - independent from colour and size. Please follow the packing methods described in the DIN 58953 part 7 or other relevant international standards.

3FSMS365118	120 x 120	96
3FSMS365126	140 x 140	80

## Wrapping material interleaved non-woven polypropylene

### SSMMS 43g / non-woven green 57g - ISO 11607, EN 868, CE

SSMMS 43g is an extremely tear proof and resilient non-woven material made of polypropylene fibres which is perfectly suitable for heavy duty applications. It is a five layered SSMMS-material, which is made up of three layers of „spunbond-fibres“ and two layers of „meltblown-fibres“.

Non-woven 57g of green colour is a heavy duty material made from a mixture of plastic and pulp fibres. It is characterized by very good drapability and an over-average mechanical strength. The fibre mixture supports complete drying of condensate after steam sterilisation.

Within this interleaved combination blue and green sheets are packed together. There is no need to combine from two different packs. The different colours of inner and outer layers make detection of damages of the final pack easier. This specific selection combines excellent strength of the SSMMS with the easy drying features of the 57g mixed fibres. Non-woven green 57g should be used as inner packaging, SSMMS 43g as outer packaging.

Please follow the packing methods described in the DIN 58953 part 7 or other relevant international standards.

## Double wrap non-woven polypropylene SMMS 47g / non-woven green 57g - ISO 11607, EN 868, CE

SMMS 47g is an extremely tear proof and resilient non-woven material made of polypropylene fibres which is perfectly suitable for heavy duty applications. It is a four layered SMMS-material, which is made up of two layers of „spunbond-fibres“ and two layers of „meltblown-fibres“.

Non-woven 57g of green colour is a heavy duty material made from a mixture of plastic and pulp fibres. It is characterized by very good drapability and an over-average mechanical strength. The fibre mixture supports complete drying of condensate after steam sterilisation.

**Within this combination blue and green sheets are welded together.** The different colours of inner and outer layers make detection of damages of the final pack easier. This specific selection combines excellent strength of the SMMS 47g with the easy drying features of the 57g mixed fibres. Non-woven green 57g should be used as inner packaging, SMMS 47g as outer packaging.

Please follow the packing methods described in the DIN 58953 part 7 or other relevant international standards.

### Double wrap non-woven polypropylene SMMS 47g / non-woven green 57g

Article-No.	Size in cm	Pack (pcs.)
3FDOP372208	75 x 75	120
3FDOP372212	90 x 90	100
3FDOP372214	100 x 100	100
3FDOP372218	120 x 120	72
3FDOP372226	140 x 140	52

## Double wrap non-woven polypropylene SSMMS 55g / non-woven green 67g - ISO 11607, EN 868, CE

SSMMS 55g is an extraordinarily tear proof and resilient non-woven material made of polypropylene fibres which is perfectly suitable for heavy duty applications. It is a five layered SSMMS-material, which is made up of three layers of „spunbond-fibres“ and two layers of „meltblown-fibres“.

Non-woven 67g of green colour is a heavy duty material made from a mixture of plastic and pulp fibres. It is characterized by good drapability and an over-average mechanical strength. The fibre mixture supports complete drying of condensate after steam sterilisation.

**Within this combination blue and green sheets are welded together.** The different colours of inner and outer layers make detection of damages of the final pack easier. This specific selection combines unsurpassed strength of the SSMMS 55g with the easy drying features of the 67g mixed fibres. Non-woven green 67g should be used as inner packaging, SSMMS 55g as outer packaging.

Please follow the packing methods described in the DIN 58953 part 7 or other relevant international standards.

### Double wrap non-woven polypropylene SSMMS 55g / non-woven green 67g

Article-No.	Size in cm	Pack (pcs.)
3FDOP373208	75 x 75	100
3FDOP373212	90 x 90	100
3FDOP373214	100 x 100	80
3FDOP373218	120 x 120	60
3FDOP373226	140 x 140	40

## Wrapping material interleaved non-woven polypropylene

### SMMS 60g / non-woven green 67g - ISO 11607, EN 868, CE

SMMS 60g is an extraordinarily tear proof and resilient non-woven material made of polypropylene fibres which is perfectly suitable for heavy duty applications. It is a four layered SMMS-material, which is made up of two layers of „spunbond-fibres“ and two layers of „meltblown-fibres“.

Non-woven 67g of green colour is a heavy duty material made from a mixture of plastic and pulp fibres. It is characterized by good drapability and an over-average mechanical strength. The fibre mixture supports complete drying of condensate after steam sterilisation.

Within this interleaved combination blue and green sheets are packed together. There is no need to combine from two different packs. The different colours of inner and outer layers make detection of damages of the final pack easier. This specific selection combines unsurpassed strength of the SMMS with the easy drying features of the 67g mixed fibres. Non-woven green 67g should be used as inner packaging, SMMS 60g as outer packaging.

Please follow the packing methods described in the DIN 58953 part 7 or other relevant international standards.

## Tapes with indicator

## Tapes without indicator

Stericlin® indicator tapes and masking tapes are the ideal and safe solution for sealing all wrapping materials.

The beige tapes are intended for use with wrapping material crepe, the blue tapes are intended for use with wrapping material non-woven and SMS in the steam sterilisation process. Available with or without indicator print.

Also part of our range: Adhesive tapes with EO-, VH2O2 (plasma)- and dry heat-indicator and robust tape dispensers.

Please follow the packing methods for wrapping materials described in the DIN 58953 part 7 or other relevant international standards.

## Stericlin® Trayliner protects wraps from puncture

### A must when using wrapping materials

Flexible SBS (sterile barrier system) wrapping materials and trays are forming a very efficient packaging system for instruments. Excellent permeability facilitates steam penetration and drying, low weight reduces condensate, the system is very cost effective.

Stericlin® Trayliners are optimizing the performance of this sterile barrier system. Made from heavy duty crepe paper, the trayliner protects the sterile barrier wrapping material from outbound puncture which is caused by sharp instruments. The trayliner forms a flat bottom and reduces the risk of rupture when moving the tray. The material absorbs excessive condensate and humidity which is created during the steam phase. The drying process then is supported by a high evaporation rate.

How to use: Position a sheet of trayliner under the tray and simply wrap the sterile barrier wrapping sheet (crepe, non woven or SMS) as usual. The edges of the trayliner are automatically folded up and are forming a protective layer around the tray.

For this field of application also stericlin® Absorbent inner layers (Page 4-40) are qualified.

#### Trayliner white

Article-No.	Size in cm	Pack (pcs.)
3FTSZ420102	25 x 25 *) Outer dimension 35 x 35	500
3FTSZ420104	48 x 25 *) Outer dimension 58 x 35	500
3FTSZ420110	58 x 35	500

\*) Trayliner „pre-formed“ with cutted edges - welted excess length (5 cm each side)

## Stericlin<sup>®</sup> Traylabels

### The easy way to identify and trace your instrument trays

Stericlin<sup>®</sup> traylabels allow an easy marking and color coding of instrument trays.

For instance missing instruments can be noted on the labels, or instruments that have to be send out for maintenance. Different colours can be used for one look identification of incomplete trays - used trays - trays ready for packaging, etc.

Stericlin<sup>®</sup> traylabels are available in five different colours. The material is temperature-resistant up to 140°C and is compatible with STEAM-, EO- and FORM-sterilisation processes. Soft tip pens can be used for writing on the material.

#### Stericlin<sup>®</sup> Traylabels

Article-No.	Description	Pack (pcs.)
3FTSZ430102	Traylabel white	1.000
3FTSZ430104	Traylabel orange	1.000
3FTSZ430106	Traylabel blue	1.000
3FTSZ430108	Traylabel green	1.000
3FTSZ430110	Traylabel yellow	1.000

## Absorbent inner layers

### Avoids wet trays

Condensed water and wet trays are a risk which can prevent the success of the sterilisation process. You can find a remedy by using stericlin® inner layers made of water-absorbent non-woven material.

Absorbent inner layers soaks up the condensate inside the sterilisation container or tray, uniformly spreads it and therefore allows a better vaporisation during the drying process.

Note: Absorbent inner layers do not have any barrier function like medical non-woven materials for packaging and sterilisation. Do not use them as a sterile barrier system.

For this field of application also stericlin® Trayliner (Page 4-20) are qualified.

## Stericlin® Container label with STEAM-indicator for all current Container-systems

Stericlin® Container labels are self-adhesive and provide enough space to note all data that are required for the traceability of sterile goods. Stericlin® container labels can be easily removed from the container at the point of use and can be attached to the respective patient files. The Container labels have a STEAM-indicator and are for single use only.

## Stericlin® Containerseal

### The safe method to seal containers

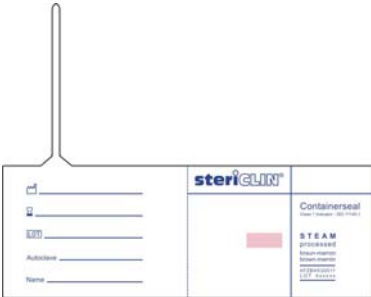

Containerseal allow sealing all common container systems with a locking loop in a convenient and safe way.

The Containerseal will be inscribed, then removed from the release paper. The small strip of the Containerseal must be pulled through the lock loop of the container and then it shall be fixed to the backside of the self adhesive Containerseal. Now the adhesive lock has to be bend over at the perforation and pressed firmly for bringing the seals surfaces together. If the container is opened the seal gets broken.

Thus an unbroken seal witnesses that the container has not been opened since sterilisation.

#### Stericlin® Containerseal

	Article-No.	Description	Pack (pcs.)
	3FCZB460102	white, with STEAM-indicator size: 80 x 40 mm (folded 40 x 40 mm) strip: 2,5 mm x 70 mm without documentation field	500

## Stericlin® Containerfilters - ISO 11607, CE

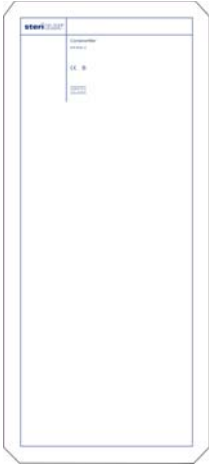

### for Aesculap-, Wagner-, Martin- and Medicon-containers

Stericlin® Containerfilters are a reliable sterile barrier against bacteria. Stericlin® Containerfilters are for single use only and guarantee a reproduceable and efficient quality, whereas reusable filters are degrading after several cycles. Moreover Stericlin® Containerfilters are cost efficient and proven since more than 20 years.

#### Containerfilters for Aesculap-containers

## Dust cover bags with self-adhesive closure

### Protective packaging for sterile barrier systems

Dust cover bags are storage and transport packaging for sterile goods. They provide the required protection for sterile barrier systems during transport and storage.

With this **protective packaging** the possible shelf life can be extended. A recommendation for the storage period of sterile medical devices is available for download at [www.vp-group.de/en/Medical-Packaging/Regulatory](http://www.vp-group.de/en/Medical-Packaging/Regulatory)

#### Dust cover bags

## Safety bags for disinfected medical devices - according to the recommendation of DGSV's Quality Task Group (90)

How do you best store semi-critical medical devices after they have been disinfected, so that they are not at risk of recontamination? It is vital that they remain disinfected.

We have developed a safety bag for this, which will make the procedure a great deal easier for you and a lot more transparent. The safety bag from stericlin® reliably protects your disinfected medical devices from recontamination. Thanks to its germ-free inner side, the bag fulfils and exceeds the 2015 recommendations of DGSV's ([www.dgsv-ev.de](http://www.dgsv-ev.de)) Quality Task Group (90).

Stipulated low-germ storage is fulfilled in every regard through our sterilised safety bag. The safety closure facilitates quick packaging of disinfected medical devices. The bag can subsequently only be opened by breaking the tear notch. In addition, the type of disinfection, packaging date and a signature can be recorded for detailed identification.

## Bowie & Dick single use test pack - ISO 11140-4

### The utmost challenge for your steriliser

Correct functionality of a steriliser is key when it comes to ensuring excellent working results in the central sterile supply department (CSSD). The stericlin® Bowie & Dick single use test pack enables daily function checks and quality control of sterilisers.

Complete ease of handling: Place the test pack in your steriliser, run the Bowie & Dick test programme, remove the test sheet, check the result, and that's it. The indicator on the included test sheet changes from blue to pink, and contains no heavy metals. After use, the colour of the indicator no longer changes, ensuring total reliability of documentation.

The stericlin® single use test pack for performing daily Bowie & Dick tests for steam sterilisers was awarded the prestigious Kitemark quality certification of the British Standards Institute (BSI). This confirms the product's compliance with the stringent DIN EN ISO 11140-4 standard requirements by an internationally accepted, independent testing institute.

Best quality in compliance with standards and fulfilment of ISO 11140-4 requirements can and must be expected from a test tool like the stericlin® Bowie & Dick single use test pack. This is only possible when using a specially equipped steriliser as implemented by the development laboratory at VP. BSI testers verified the fulfilment of prerequisites for this test as well as correct execution, on site and in person.

The Kitemark of the BSI is one of the oldest symbols of quality ever and is especially awarded to products and services where safety plays a crucial role, subject to the most stringent conditions.

## Bowie & Dick Helix Test - ISO 11140-4

### The utmost challenge for your steriliser

The stericlin® Bowie & Dick Helix Test objectively checks your steriliser for air removal and steam penetration. Any kind of error will be detected uncompromisingly.

Simply place the indicator strip in the capsule and screw it into the process challenge device, run the Bowie & Dick test program of your steriliser, replace the indicator strip, check the result - that's all.

The Bowie & Dick Helix Test complies to the requirements of the ISO 11140-4. VP safeguards the compliance with the performance requirements by a highly precise test steriliser. Therefore we guarantee conformity to standards and absolute constancy of this product.

The indicator imprinted on the strip changes colour from blue to pink during a proper sterilisation. This colour change is not reversible. Due to that your documentation is absolutely safe. The indicator is free of heavy metals.

## Bowie & Dick test system DIN A 4

### The utmost challenge for your steriliser

The Bowie & Dick tests system DIN A 4 is intended to check the steam penetration of steam sterilisers during the daily Bowie & Dick Test. The test system is suitable for the use with the Bowie & Dick - test program (temperature: 134°C / time 3,5 minutes) provided from steam sterilisers with pre-evacuation steps. The test system consists of 3 components: The test sheet, the test pack and the stainless steel test frame.

The Bowie & Dick test sheet DIN A 4 complies to the requirements of the ISO 11140-3. VP safeguards the compliance with the performance requirements by a highly precise test steriliser. Therefore we guarantee conformity to standards and absolute constancy of this product.

The indicator is free of heavy metals. The initial colour is blue, the transition colour is pink. After transition the colour of the indicator remain unchanged. Your documentation is absolutely safe.

The test pack is made from special filter paper which is reusable for 15 times. The sheet above is printed with sterilisation stable ink, the print pattern provides appropriate guidance for documentation. An additional indication of the centre of the test pack via cut edges makes placement and replacement of the test sheet very simple.

The stainless steel test frame is reusable for at least unlimited times.

## Bowie & Dick test system DIN A 5

### The utmost challenge for your steriliser

The Bowie & Dick tests system DIN A 5 is intended to check the steam penetration performance of your steam sterilisers whilst run the daily Bowie & Dick Test. The test system is suitable for the use with the Bowie & Dick - test program (temperature: 134°C / time 3,5 minutes) provided from steam sterilisers with pre-evacuation steps. The test system consists of 3 components: The test sheet, the test pack and the stainless steel test frame.

The Bowie & Dick test sheet format DIN A 5 is printed with indicator extensively in order to simplify indication of errors within the sterilisation process.

The indicator is free of heavy metals. The initial colour is blue, the transition colour is pink. After transition the colour of the indicator remain unchanged. Your documentation is absolutely safe.

The test pack is made from special filter paper which is reusable for 15 times. The sheet above is printed with sterilisation stable ink, the print pattern provides appropriate guidance for documentation. An additional indication of the centre of the test pack via cut edges makes placement and replacement of the test sheet very simple.

The stainless steel test frame is reusable for at least unlimited times.

## BMS Batch Monitoring System

### From safety experts for safety experts

Responsibility for the reprocessing of medical devices requests that all relevant processes are validated and consistently monitored. The monitoring of steam sterilisation processes should combine parametric control and the use of a specific process challenge device with a chemical indicator (BMS). It monitors air removal and steam penetration within critical instruments. The BMS signals by the means of simulation that sterilisation parameters have been achieved even within critical sterile goods.

If the colour change of the chemical indicator is uniform and if the measured parameters are within tolerances, the batch may be released - with the knowledge that the highest process safety has been achieved.

The steriCLIN® BMS 1200 fulfils the requirements of the performance testing according to EN 867-5 5.3 - 5.3.3.2.

## Emulating Indicator Type 6 (STEAM-indicator)

### ISO 11140-1

The stericlin® Type 6 emulating indicator strips objectively test your sterilisation processes according to sufficient steam penetration with respect to time, temperature, and saturated steam. Only adequate conditions of all three parameters simultaneously will result in a correct colour change. Failures however will be detected without compromise.

Simply place the indicator strip in any desired location when loading the steriliser, and the success of sterilisation can be checked independently for the various locations or different trays.

The stericlin® Type 6 emulating indicator strips meet the requirements of ISO 11140-1 for type 6 indicators (emulators). VP ensures the compliance with all performance requirements using a high-precision resistometer (BIER vessel). We guarantee compliance to standards and absolute consistency of this product.

## Indicatorstrips- with STEAM-, EO- and FORM-indicator

### The easy method of documentation - ISO 11140-1

Indicatorstrips are a reasonably priced method for sterilisation-control and documentation. The indicator strips conform to type 1 of ISO 11140. The change of the indicator clearly shows that the strip has been exposed to the sterilisation process.

On the indicatorstrips is plenty space fields of documentation, for lot, autoclave, content, decay, OK/Fail and signature. The steam-strips are available in a self-adhesive version, too. Indicatorstrips are for single-use only.

Please be careful: direct contact of the indicator ink to metal surfaces may lead to malfunction.

### Labels, single layer self adhesive backing, for the marking of sterile barrier systems

Article-No.	Description	Pack (pcs.)
	<b>3FSKS670106</b> with STEAM-indicator size: 25 x 20 mm (25 Labels per sheet)	2.500
	<b>3FSKS670108</b> with FORM-indicator size: 25 x 20 mm (25 Labels per sheet)	2.500
	<b>3FSKS670110</b> with EO-indicator size: 25 x 20 mm (25 Labels per sheet)	2.500
	<b>3FSKS670112</b> with VH2O2 (PLASMA)-indicator size: 25 x 20 mm (25 Labels per sheet)	2.500
	<b>3FSKS670114</b> with GAMMA-indicator size: 12,5 mm Ø (on roll)	5.000

## Labels for printers

### single and double self adhesive

#### Endless self adhesive labels on reel for Thermotransfer-printers

	Article-No.	Description	Pack (reels)
	3FSKS675105	with STEAM-indicator double self adhesive (Sandwich) width of roll: 70 mm - core: 50 mm Length: 80 lfm.	5
	3FSKS675106	just like 3FSKS675105, but core 76 mm	5
	3FSKS675110	with STEAM- and FORM-indicator double self adhesive (Sandwich) width of roll: 70 mm - core: 50 mm length: 80 lfm.	5
	3FSKS675115	with STEAM- and EO-indicator double self adhesive (Sandwich) width of roll: 70 mm - core: 50 mm length: 80 lfm.	5
	3FSKS675120	with PLASMA-indicator double self adhesive (Sandwich) width of roll: 70 mm - core: 50 mm length: 40 lfm.	5

#### Self adhesive labels on DIN A4-sheets for Laser-printers

	Article-No.	Description	Pack (pcs.)
	3FSKS675122	with STEAM-indicator single self adhesive size: 48 x 25 mm (44 labels per sheet)	2.000
	3FSKS675124	with STEAM-indicator single self adhesive size: 65 x 40 mm (21 labels per sheet)	2.000

**Self adhesive labels on reel for Thermotransfer-printers**

	Article-No.	Description	Pack (pcs.)
	3FSKS675130	with STEAM-indicator double self adhesive (Sandwich) size: 55 x 31 mm - core: 40 mm width of roll: 58 mm roll à 1.000 pcs.	10.000
	3FSKS675135	with STEAM-indicator double self adhesive (Sandwich) size: 58 x 35 mm - core: 40 mm width of roll: 63 mm roll à 1.000 pcs.	10.000
	3FSKS675140	with STEAM-indicator double self adhesive (Sandwich) size: 60 x 31 mm - core: 40 mm width of roll: 64 mm roll à 1.000 pcs.	10.000
	3FSKS675145	with STEAM-indicator double self adhesive (Sandwich) size: 60 x 44 mm - core: 40 mm width of roll: 64 mm roll à 1.000 pcs.	10.000
	3FSKS675150	with STEAM-indicator double self adhesive (Sandwich) size: 63 x 40 mm - core: 40 mm width of roll: 67 mm roll à 1.000 pcs.	10.000
	3FSKS675155	with STEAM-indicator double self adhesive (Sandwich) size: 70 x 35 mm - core: 40 mm width of roll: 73 mm roll à 1.000 pcs.	10.000
	3FSKS675156	just like 3FSKS675155, but core 76 mm	10.000
	3FSKS675158	without print / without indicator double self adhesive (Sandwich) size: 75 x 35 mm - core: 40 mm width of roll: 78 mm roll à 1.000 pcs.	10.000

### Self adhesive labels on reel for Thermotransfer-printers

	Article-No.	Description	Pack(pcs.)
	3FSKS675160	with STEAM-indicator double self adhesive (Sandwich) size: 90 x 35 mm - core: 40 mm width of roll: 93 mm roll à 1.000 pcs.	10.000
	3FSKS675165	with STEAM-indicator double self adhesive (Sandwich) size: 102 x 56 mm - core: 76 mm split in T-form in front-material (= 102 x 35 mm + 51 x 21 mm x2) width of roll: 105 mm roll à 1.000 pcs.	10.000
	3FSKS675170	with STEAM-indicator single self adhesive size: 70 x 38,1 mm - core: 40 mm control bar 3 mm width (for printer) on backside width of roll: 70 mm roll à 2.500 pcs.	10.000
	3FSKS675175	with STEAM-indicator single self adhesive perforated centered size: 88,5 x 36 mm - core: 40 mm with remaliner width of roll: 110 mm roll à 1.000 pcs.	10.000
	3FSKS675180	with STEAM- and FORM-indicator single self adhesive perforated centered size: 88,5 x 36 mm - core: 40 mm with remaliner width of roll: 110 mm roll à 1.000 pcs.	10.000

Suitable thermal transfer films can be found on catalogue page 8-15.

## Stericlin<sup>®</sup> Patient-related batch traceability documentation system

Self adhesive labels with printing and code, Size: 92 x 40 mm, dispensing box à 250 pcs.

Article-No.	Sterilisation	Pack (pcs.)
3FSKS680102	STEAM	1.000

### Batch cards size DIN A 5

Article-No.	Sterilisation	Pack (pcs.)
3FSKS680106	STEAM	600

### Batch cards size DIN A 4

Article-No.	Sterilisation	Pack (pcs.)
3FSKS680108	STEAM	100

### Patient forms

Article-No.	Size	Pack (pcs.)
3FSKS680112	DIN A 4	500

## Sterilisation-proof fibre-tip pens

### Removable post-it notes

#### Sterilisation-proof fibre-tip pens

Special stericlin® fibre-tip pens for marking all single-use products (Sterile barrier systems, adhesive tapes, labels, ...).

Line width „F“ (approx. 0,6 mm).

Article-No.	Colour	Pack (pcs.)
3FSZB710102	black	10
3FSZB710104	blue	10
3FSZB710106	red	10

#### Removable post-it notes

Removable post-it notes for marking/inscribing metal containers, plastic containers etc. **after** the sterilisation process. The post-it notes can be removed without residue.

Article-No.	Size	Pack (pcs.)
3FSZB710160	15 x 5 cm	2.500 (50 blocks)

## Stericlin® Instrument bags

### protect and fix your instruments

Forceps, knife handles, probes, fine accessories etc. are often added slackly to the instrument tray inside a kidney basin. Thus high-quality instruments may easily get damaged during transport. Moreover, components which have fallen out of the kidney basin are tediously to find or to remove out of the tray.

Stericlin® Instrument bags protect your products absolutely reliably from damages by the combination of sterilisation-resistant non-woven and transparent laminate film. This material-combination has proved itself millions of times with sterile barrier systems.

The division of the bag into separate parts and different bag sizes safeguards a clear arrangement, quick identification and intentional removal of the assorted instruments.

Attention! This product is not a sterile barrier system! Upon assembling the instruments you can fold or roll the bags, add them to the instrument tray and sterilise them in the container (or in flexible or see-through-packaging). Instrument bags are intended for single-use only.

#### Instrument bags

Article-No.	Size in cm	Pack (pcs.)
3FSZB730120	52 x 21	250

## Hygiene wipes microfibre (single-use)

### Compatible with customary disinfectants

Stericlin® hygiene wipes made of 100 % micro fibres are compatible with customary disinfectants. The lint-free wipe is characterised by its outstanding cleaning and absorption performance.

The absorption capacity amounts to 850 % at a basis weight of 60 g/m². The hygiene wipes are intended for single-use only.

#### Hygiene wipe microfibre (single-use)

Article-No.	Description	Pack (pcs.)
3FSZB790120	Hygiene wipe microfibre (single-use) Colour: white Size: 305 x 340 mm Pack: 8 x 40 pcs.	320

## Thermal transfer film APX® FH+

### Colourfast during steam sterilisation

APX® FH+ is a high-end wax/resin ribbon providing a printing quality and mechanical resistances exceeding the market standards. It ensures an excellent quality of transfer at low energy on all smooth materials, coated papers as well as synthetics.

Printed on stericlin® self-adhesive labels (Article-No. 3FSKS675...) colourfast during steam sterilisation according to DIN EN 646 and DIN EN 648 (confirmed by the research and testing institute ISEGA, food contact approved 1935/2004/EC).

- Very high resistance to smudge and scratch
- Heat resistance up to 150° C.
- Very good printing quality
- Excellent sensitivity and receptor multi-compatibility

Please note the right printer settings (speed / temperature).

#### Thermal transfer film APX® FH +

Article-No.	Description	Pack (reels)
3FSGZ815460	Thermal transfer film APX® FH+ Outside coated 80 mm / 74 m Core 12,7 mm Ø	10
3FSGZ815462	Thermal transfer film APX® FH+ Outside coated 80 mm / 300 m Core 25,4 mm Ø	5
3FSGZ815472	Thermal transfer film APX® FH+ Outside coated 110 mm / 300 m Core 25,4 mm Ø	5

## Seal seam integrity test / Seal Test according to ISO 11607

### For checking the integrity of your heat seal seam

The **seal seam integrity test** by stericlin® acts as your simple tool to check the completeness and integrity of the seal seams produced by your heat sealer. A special testing solution quickly and reliably identifies any channelling.

The stericlin® **Seal Test** is for the routine testing of your heat sealer. The medical grade paper is imprinted with a contrast stripe which clearly detects irregularities of the seal seam.

Further requirements concerning the products can be found in the **DGSV Guideline for the validation of packaging processes according to ISO 11607-2** (Annex A.7, Page 23).

The entire guideline is available for download at [www.vp-group.de/en/Medical-Packaging/Regulatory](http://www.vp-group.de/en/Medical-Packaging/Regulatory)

### Seal seam integrity test and Seal Test according to ISO 11607

Article-No.	Description	Pack (pcs.)
3FSZB830102	Seal seam integrity test (75 ml)	1
3FSZB830106	Seal Test paper	250
3FSZB830108	Seal Test Tyvek®	125
3FSZB830110	Seal Test Kit: Seal seam integrity test (75 ml) + Seal Test paper (250 pcs.)	1

## Sterile goods transport baskets made of stainless steel - for the safe transport of wrapped instrument trays

Sterile goods transport baskets made of stainless steel are indispensable for the safe sterilisation, transport and storage of wrapped instrument trays. They protect the wrapping materials used during the packaging process throughout the entire logistics chain.

There are two variants available: Nestable/stackable baskets with handle as well as baskets for storage of oversized trays/rental trays. The baskets are manufactured according to the highest quality standards.

In order to save space the empty baskets can be nested during storage and cleaning.

### Sterile goods transport baskets made of stainless steel

Article-No.	Description	Pack (pcs.)
3FEDS842870	Sterile goods transport basket DIN stainless steel - with handle nestable/stackable Size: 600 x 300 x 135 mm	5
3FEDS842872	Sterile goods transport basket DIN stainless steel - with handle nestable/stackable Size: 600 x 300 x 150 mm	5
3FEDS842874	Sterile goods transport basket DIN stainless steel - for storage of oversized trays/rental trays Size: 600 x 300 x 45 mm	5

## Sterile goods transport trolleys and Z-trolleys

### For the safe transport of your medical devices

#### The sterile goods transport trolley

An extremely smooth and robust construction with smooth running wheels and individual partitioning options. The modern and flexible design offers multiple options for individual solutions. All measures, coloring and labelling can be adjusted.

#### The Z-trolley

The intelligent and modern design of the Z-trolley by stericlin® combines optimum space utilization both loaded and unloaded. Telescoped when being unloaded saves more than 50 % space in your CSSD. With a special connection hook a maximum of three loaded trolleys can be combined.

**Sterile goods transport trolleys and Z-trolleys are available in the following standard versions:**

**DIN** single or double trolley (for transport baskets 60 x 30 cm)

**ISO** single or double trolley (for transport baskets 60 x 40 cm)

**If you have any special requirements please feel free to contact**

## Hygiene keyboards and mice

### Cleaning and disinfection according to DGHM/VAH

Due to their key shape and spacing, traditional keyboards are hardly cleanable and next to impossible to disinfect. This is quite critical, as in healthcare applications keyboards are often used by several people at a time, and therefore pose a threat of germ proliferation.

Our hygiene keyboards and mice can be used in hygienically critical areas e. g. in an operating theatre, in intensive care units, sterilisation departments or hygienically sensitive sectors of the industry. With their surface being completely sealed they are inured to most common cleaning and disinfection fluids. As such, the keyboards are easy to disinfect within the established cleaning processes.

Whether in hospital, at the dentist, the doctor's practice or in any other area where hygiene is at a premium, our keyboards and mice help avoid the transfer of bacteria and germs.
